EXECUTIVE SUMMARY

Accomplished **Software Engineer** with **9+ years of experience** engineering high-throughput distributed backend microservices, core banking platforms, and enterprise applications. Specialized in **Java Spring Boot, Apache Kafka, AWS, OpenShift, and ReactJS**. Proven track record of collaborating across cross-functional teams of **10+ engineers**, modernizing legacy architectures, and building event-driven systems handling **10,000+ daily high-stakes transactions** with **40% latency reduction**. Expert in SAFe/Agile delivery, cloud-native deployments, CI/CD pipeline automation, and technical mentorship.

TECHNICAL EXPERTISE

Backend & Architecture: Java 8/11/17, Spring Boot, Spring Cloud, RESTful APIs, JPA/Hibernate, C# .NET MVC, Microservices, Event-Driven Architecture

Cloud & DevOps Infrastructure: AWS (EKS, EC2, S3), Red Hat OpenShift, Docker, Kubernetes, Jenkins CI/CD, Git, SAFe / Agile Scrum

Event Streaming & Databases: Apache Kafka, Event-Driven Patterns, PostgreSQL, SQL Server, Schema Design & Index Tuning

Frontend & UI/UX: ReactJS, Angular (v4+), TypeScript, JavaScript (ES6+), HTML5, CSS3, Responsive Web Architecture

PROFESSIONAL EXPERIENCE

Software Engineer | ANZ Operations and Technology

Nov 2020 – Present | Bengaluru

Institutional Banking Division — Core Banking Modernization & Distributed Systems

- Architectural Modernization:** Spearheaded end-to-end refactoring of **ORION**, ANZ's flagship core institutional banking application, migrating legacy monolith components into high-availability Java Spring Boot microservices deployed on AWS and OpenShift.
- Event Streaming & Scale:** Designed and implemented an event-driven architecture using **Apache Kafka** to process **10,000+ daily financial transaction hits** across internal subsystems and external stakeholders with 99.99% reliability.
- Performance Optimization:** Re-engineered data pipelines and query caching mechanisms, accomplishing a **40% reduction in system response latency** and drastically elevating user experience for Institutional Bankers.
- Engineering Collaboration & Mentorship:** Guiding and mentoring junior developers within a squad of **10+ engineers and designers**; contributing to technical design, conducting code reviews, and maintaining core banking architecture standards.
- Full-Stack & Cloud Integration:** Architected responsive enterprise portals using **ReactJS** and orchestrated containerized deployments leveraging **AWS (EKS, EC2, S3)** and automated **Jenkins CI/CD** pipelines.
- Standard Setting:** Established the ORION refactored architecture as the reference blueprint across ANZ Institutional Banking for subsequent microservices initiatives.

Software Engineer | Volvo Group India Pvt. Ltd.

Nov 2016 – Nov 2020 | Bengaluru

Global IT Operations — Aftermarket Systems & Telematics Integration

- Aftermarket Integration (NAMS):** Architected and delivered NAMS (New After Market Service Integration System) using **ReactJS, C# MVC API, Docker, and OpenShift**, enabling real-time monitoring and alerting for subsystem operations.
- Enterprise Vehicle Data Platform (VDA+):** Developed central vehicle data administration modules providing unified read/write access across **Volvo Trucks, Volvo Buses, and Mack Trucks** globally using Angular 4 and C# MVC.
- API & Frontend Integration:** Designed reusable component libraries and robust RESTful APIs, securing high uptime and smooth data integration across heterogeneous backend legacy databases.
- Honours & Recognition:** Conferred with the prestigious **Volvo IT Star Award** and multiple **SPOT Awards** for technical innovation. Secured **Runners-Up position** in Volvo IT Ignite Hackathons (2017 & 2018).

KEY ENGINEERING PROJECTS

ORION — Core Banking Transformation (ANZ)

ReactJS, Spring Boot, AWS, OpenShift, Kafka, PostgreSQL

Pivotal core banking system powering institutional banking workflows. Contributed to core architecture design, Kafka event-driven decoupling, containerized deployments, and microservices decomposition. Handled 10,000+ daily payload executions with zero data loss.

NAMS — After Market Integration Center (Volvo)

ReactJS, C# MVC API, Docker, OpenShift

Centralized integration hub for global Volvo aftermarket operations (NIC). Implemented real-time dashboard monitoring, subsystem error tracking, automated alert triggers, and containerized cloud deployment.

VDA+ — Unified Vehicle Data Administration (Volvo) Angular 4, TypeScript, C# MVC API, SQL Server
Mission-critical centralized platform managing vehicle telemetry and card generation across Volvo Trucks, Volvo Buses, and Mack Trucks. Built robust UI models, complex API endpoints, and stakeholder reporting features.

EDUCATION & QUALIFICATIONS

Bachelor of Engineering (B.E.) Information Science & Engineering Acharya Institute of Tech (VTU) 2016 Aggregate: 72.4%	Pre-University Course (PUC) Computer Science Major St. Joseph's PU College 2012 Aggregate: 80.4%	SSLC (Secondary School) State PU Board, Karnataka St. Ann's High School 2010 Aggregate: 72.7%
